Sir, we need the following reports for the three wells:

- Monthly reports from September 2018 to the present.
- Quarterly fluid added or lost 4th quarter 2018 to the present.
- Annual analysis of the wells' injection fluid by a lab. 2018 and 2019 missed. Must collect 2020 results from the three wells promptly. Check your UIC permit.

Ray,

The wells are the Burns-Grohowski 1-33, Burns Grohowski 2-33, and the Burns Grohowski 4-33. They were permitted in 2013, We had previously withdrew some wells from our original application. Thanks again, Charlie

Before I can answer the enforcement question, which wells are active now? The database shows that an Area permit request for some wells was withdrawn?

Subject: Columbus.

Ray,

There was a problem with your last email. Can you please resend.

I am confirming that we have no enforcement issues and can begin injection operations once we submit updated Mechanical Integrity Tests.

In the past we have been allowed to submit MITs witnessed by Michigan EGLE district geologist William Mitchell.

Is that still acceptable?

Thank you for your help in this matter.

Charlie Lawrence
